

Dear Reader,

We are excited to ring in 2010 and are looking forward to a great year. This newsletter highlights the open beta test for Viper For Unix.

Announcement

To keep you up-to-date, here is our latest news item.

Viper For Unix - Open Beta Test

Our Printing solution '[Viper for Windows](#)' will soon be available on Linux/Unix.

We are searching up to 5 participants for this beta test. You should be willing to give feedback and to send error reports from time to time. Our developer will support you during installation and during operation. You should be familiar with Viper or willing to learn this ideal print solution for Progress OpenEdge.

'Viper For Unix' will use [wxWidgets](#), a C++ library that lets developers create applications for Windows, OS X, Linux and UNIX on 32-bit and **64-bit** architectures as well as several mobile platforms including Windows Mobile, iPhone SDK and embedded GTK+.

Together with [OF-1 \(AJAX or Java Skin-Client\)](#) Viper for Unix will help you to build a perfect SaaS application out of the box, whether you runs Windows or Linux/Unix.

Resources

Here are few resources from our websites

[OF-1 main site](#): Find out what OF-1 is and how this reliable, high-performance and UI-independent "Full Lifecycle Development Environment" for OpenEdge can help you to enter the SaaS market, migrate from other outdated frameworks like ADMx and create great UIs with a Wow factor with the .NET UI. And all this with coding only in ABL!

[OF-1 online demo](#): Explore AJAX and Java, SaaS and Cloud Computing, superior fast development and zero deployment, Mash-Ups and much more in our online demo. Enter your name, company and email and you will receive your login account in a few seconds.

[Tools For Progress](#): *PCase* is a Progress focused Case-Tool, which integrates perfectly into the OpenEdge Architect and enables you to document and design your databases. It is expandable and can be used to create source code, e.g. for ProDataSets. *Viper* is a tool to interactively design and print reports. You can create PDFs on the fly out of your reports. *Skin-Client* is a tool to integrate UIs like AJAX or Java into your application and to handle triggers from these UIs in the ABL.

best regards
Your OF-1 / Tools4Progress team
